Guillaume Ammouche

Full-Stack Software Engineer | React · TypeScript · Python

guillaumeammouche@protonmail.com | github.com/benhammoush
Seeking opportunities in Da Nang, Vietnam | French: Native | English: Fluent

TECHNICAL SKILLS & TOOLS

Languages: TypeScript, JavaScript, Python, VBA, Solidity.

Frontend & design: React, Next.js, HTML/CSS, Tailwind CSS, Chakra UI, Ant Design, Three.js / React Three Fiber, Figma.

Backend & data processing: FastAPI, Uvicorn, REST APIs, OpenAPI, WebSockets, background workers, pandas, NumPy.

Systems & networking: Windows, Linux/Ubuntu, Nginx, IIS, PM2, Tailscale.

Hosting platforms used: AWS EC2, OVHcloud, DigitalOcean, CloudCluster, Vercel, Netlify.

Managed services: Cloudflare Workers and KV, Firebase.

Testing & monitoring: pytest, Vitest, Playwright, Grafana.

Delivery & collaboration: Git, GitHub Actions, Jira, GitHub Projects.

SELECTED PROFESSIONAL EXPERIENCE

Co-Founder & Full-Stack Developer — Apollo

Jun 2022 – Aug 2026

- Consolidated fragmented research, backtesting and live monitoring into a platform **used daily by a small team of traders**, supporting **28 currency pairs across five brokers concurrently**.
- Owned specifications, technology choices and deployment, prioritizing rapid iteration on real market data.
- Built FastAPI/WebSocket services and a React/TypeScript research workspace, with shared strategy logic for live MetaTrader 5 processing and historical replay.
- Designed process-based concurrency and tuned hosted Windows machines, adjusting RAM/virtual memory, worker concurrency, CPU allocation, services and application settings to run memory-intensive workloads within host capacity.

Founder & Full-Stack Developer — Dripperz

Jan 2022 – Mar 2022

- Assembled and coordinated approximately 10 contributors across engineering, marketing and art for a launch that sold **approximately 500 NFTs and generated approximately US$100,000 in gross primary sales**.
- Built Python tooling for weighted-trait artwork and metadata generation, Solidity mint contracts, and a React/TypeScript minting application with a rarity explorer; deployed on AWS using Linux, Nginx and TLS.

BI Developer — Eowin

Oct 2019 – Mar 2022

- **Sole developer of KPI automation and document export-control tooling used by more than 2,000 engineers** supporting large industrial engineering programmes.
- Automated KPI reporting, document markings and document-structure validation with Excel/VBA and Word/VBA; developed the export-control solution over more than a year.

ADDITIONAL EXPERIENCE & RECENT PROJECTS

Freelance Full-Stack Developer — Iris Jan 2023 – Feb 2023

- Built a unified data-aggregation API and React dashboard for Stacks blockchain analytics, normalizing provider data for wallet holdings, transaction history and charts; investigated integration limitations directly with providers.

Freelance Full-Stack Developer — 0x Mar 2022 – May 2022

- Helped select Medusa over Shopify to retain control of commerce workflows while using existing administration and payment capabilities.
- Designed and built a Next.js/TypeScript storefront with clothing customization. Integrated cryptocurrency payments with the commerce backend and administration interface for payment tracking alongside orders.

BI Developer — CNP Assurances 2017 – 2019

- Independently designed and built a customer-correspondence application used by the mailing service to draft and track customer communications.

OCTOBER 2026 PROJECT FOLLOW-UP

Independent development and modernization, separate from the original engagements above.

- **Iris rebuild:** Rebuilt Iris for Solana with React/TypeScript and a Cloudflare Worker API using typed OpenAPI contracts, provider timeouts, bounded retries and freshness metadata. Implemented Firebase-authenticated watchlists with account-scoped state and retryable deletion.
- **Crypto payment gateway (0x follow-up):** Evolved the 0x payment work into a standalone TypeScript API and React checkout on Cloudflare Workers, with merchant-scoped idempotency, locked quotes, exact USD-to-SOL conversion and backend-verified settlement. Made checkout recoverable after reloads or lost submission responses without requesting another payment.
- **Dripperz modernization:** Replaced the original Chakra UI-based interface with custom CSS, introduced automated testing and CI/CD, and moved hosting from AWS to Vercel.
- **Shared CI/CD:** Established reusable GitHub Actions workflows across six application repositories, separating credential-free pull-request checks from development delivery and manually approved production promotion, with source and artifact verification.
- **Portfolio:** Designed and built a responsive, interactive React/Three.js portfolio to showcase projects and technical experience.

EDUCATION

BTS SIO, SLAM | Two-year diploma in software development | ENSUP Guyancourt | Jul 2019

ADDITIONAL INFORMATION

International background: Four years living abroad: 1.5 years in Chiang Mai, Thailand; six months in Hawaii, USA; six months in Buenos Aires, Argentina; and 1.5 years in Da Nang, Vietnam.

AI-assisted workflow: Uses OpenChamber with OpenAI models, selected after hands-on evaluation of multiple coding assistants and model providers.

Calisthenics & coaching: Advanced athlete specializing in pushing strength and balance skills, including planches and handstands. Coached more than 10 students.

Interests: Computer hardware, software and esports.
